CEYLAN AKYOL

Senior Quality Engineer | Testing AI Systems

Vancouver, BC, Canada | akyl.cyln@gmail.com | linkedin.com/in/ceylan-akyol | cv.ceylan-akyol.workers.dev

SUMMARY

Senior Quality Engineer with 8+ years of hands-on test automation in media streaming and advertising, digital banking and enterprise software. Sole QA engineer on a team of 7 to 8 developers at CBC/Radio-Canada, owning quality from risk-based test strategy to release sign-off. Builds and maintains 320+ automated tests in Playwright/TypeScript and Serenity BDD/Java for UI, REST and GraphQL APIs, run in Jenkins and GitHub Actions. Tests AI features and AI-built code, and uses GitHub Copilot and custom skills to scale test design, mutation testing and failure triage.

EXPERIENCE

Senior Quality Engineer Oct 2022 to Present

CBC/Radio-Canada, Toronto, ON | Video streaming and ad platform (Google Cloud, AWS, Akamai)

- Own the team's test strategy: quarterly QA test plan (ISO/IEC/IEEE 29119-3), a risk map built from 158 defects across 24 releases, test standards and release sign-off.
- Triaged 54 production bugs into an automation backlog and covered fixed bugs with regression tests first.
- Write feature test plans that trace each acceptance criterion to scenarios. One plan had 132 scenarios (105 negative) and found 25 issues in static review before any test ran.
- Test code that developers build with AI coding tools: review it against acceptance criteria, prove their unit tests fail when the feature breaks, and add the end-to-end coverage they miss.
- Built Claude Code skills and agents for my QA workflow: ISTQB test analysis from acceptance criteria, test plans checked by reviewer agents, and AI triage of CI failures and Cloud Logging errors.
- Added mutation testing to my pre-merge skill: every new test runs against a deliberately broken copy of the feature and must fail, then two independent AI code reviews check the change.
- Tested the ad categorization service that sends on-demand video to an AI contextual classification vendor (OpsMage): verified the ingest chain on QA, added 14 JUnit tests and found filter and error handling bugs.
- Catch defects before release: blockers are fixed before the ticket ships, and the rest are tracked in Jira, where I logged 75% of all bugs on my recent projects.
- Main author of the Playwright/TypeScript suite for the live-stream platform (170 UI, API, visual and accessibility tests) and the video tests in the React newsroom CMS (70+ tests for GraphQL publishing, captions and HLS).
- Built a Java Serenity BDD framework from scratch (Cucumber, Screenplay, REST Assured, TestRail): 69 scenarios.
- Created Jenkins jobs with Job DSL for PR validation and twice-daily smoke and regression runs in Docker.
- Implemented Orca Security for the AV Platform in a company-wide security audit: pull request scans for secrets, SAST, IaC and dependency CVEs on 10 repos, plus a triage workflow and severity policy. 10+ vulnerabilities fixed.
- Ran k6 load tests with Grafana and Prometheus dashboards and reported endpoints failing under load.
- Test accessibility to WCAG 2.2 AA with axe-core and manual checks; axe tests run in both Playwright suites.

QA Automation Engineer May 2019 to Oct 2022

Motus Bank, Ontario, Remote

- Tested the bank's new credit card application page from development to release, on web and mobile: form validation, positive and negative paths, and behavior across browsers and devices.
- Ran extensive mobile testing across devices and screen sizes for every release of the bank's digital applications.
- Built and maintained a Selenium WebDriver and Cucumber framework in Java (JUnit, Maven, Page Object Model), with test scripts written from business requirements and custom XPath strategies for dynamic elements.
- Ran smoke, regression, functional, database and exploratory testing each release, tracked in Jira Xray.
- Tested REST APIs with Postman and REST Assured, and validated data with SQL on Oracle and MySQL (JDBC).

Support and QA Specialist Nov 2017 to Sep 2018

Talya Bilisim, Antalya, Turkey

- Owned pre-release testing and support of enterprise software, resolving critical defects with developers.

PROJECTS

AI Test Impact Agent | *TypeScript, Claude Code* Mar 2026 to Present

- Built an AI agent that combines static code analysis with Claude to predict which end-to-end tests each merge will break, and scores every prediction against real CI results.
- Designed how the agent itself is tested: schema-checked output, hallucination and prompt injection checks, and separate live and mocked test layers.

Portfolio Site with a Full Quality Pipeline | *cv.ceylan-akyol.workers.dev, Playwright, GitHub Actions* 2026

- The deploy is blocked unless all 43 requirements have a passing test. Cross-browser and mobile emulation runs, visual regression, axe WCAG 2.2 AA, Lighthouse CI budgets and a 99.8% mutation score.

SKILLS

Automation and languages: Playwright, Selenium WebDriver, Serenity BDD, Cucumber, REST Assured, JUnit, TestNG, Vitest, Stryker, TypeScript, JavaScript, Java, SQL
AI testing and AI-assisted QA: LLM output validation, hallucination and prompt injection checks, AI-generated code review, Claude Code (agents, custom skills, hooks), GitHub Copilot, ChatGPT, mutation testing, failure triage
APIs and platforms: REST, GraphQL, Pact contract testing, Postman, Bruno, OpenAPI, Google Cloud (Pub/Sub, Cloud Logging, GKE), AWS Elemental, Akamai, Docker, React, Vue, Oracle, MySQL, PostgreSQL
Performance, accessibility, security: k6, JMeter, Grafana, Prometheus, Lighthouse CI, axe-core, WCAG 2.2 AA, SonarQube, Orca Security
CI/CD and process: Jenkins, GitHub Actions, Bamboo, Docker, Git, Bitbucket, TestRail, Jira Xray, Confluence, risk-based testing, ISTQB test design (edge, negative, concurrency), BDD, cross-browser and mobile testing, Agile/Scrum

EDUCATION

Bachelor, International Relations and Affairs, Uludag University, Turkey 2017
Associate's degree, Graphic Design, Uludag University, Turkey 2019
